```
  Tutorial for Emmet.vim

                                                       mattn <mattn.jp@gmail.com>

  1. Expand an Abbreviation

     Type the abbreviation as 'div>p#foo$*3>a' and type '<c-y>,'.
     --------------------
     <div>
         <p id="foo1">
             <a href=""></a>
         </p>
         <p id="foo2">
             <a href=""></a>
         </p>
         <p id="foo3">
             <a href=""></a>
         </p>
     </div>
     --------------------

  2. Wrap with an Abbreviation

     Write as below.
     --------------------
     test1
     test2
     test3
     --------------------
     Then do visual select(line wise) and type '<c-y>,'.
     Once you get to the 'Tag:' prompt, type 'ul>li*'.
     --------------------
     <ul>
         <li>test1</li>
         <li>test2</li>
         <li>test3</li>
     </ul>
     --------------------

     If you type a tag, such as 'blockquote', then you'll see the following:
     --------------------
     <blockquote>
         test1
         test2
         test3
     </blockquote>
     --------------------

  3. Balance a Tag Inward

     type '<c-y>d' in insert mode.

  4. Balance a Tag Outward
```

```
  type '<c-y>D' in insert mode.

 5. Go to the Next Edit Point

  type '<c-y>n' in insert mode.

 6. Go to the Previous Edit Point

  type '<c-y>N' in insert mode.

 7. Update an <img>'s Size

  Move cursor to the img tag.
  --------------------
  <img src="foo.png" />
  --------------------
  Type '<c-y>i' on img tag
  --------------------
  <img src="foo.png" width="32" height="48" />
  --------------------

 8. Merge Lines

  select the lines, which include '<li>'
  --------------------
  <ul>
      <li class="list1"></li>
      <li class="list2"></li>
      <li class="list3"></li>
  </ul>
  --------------------
  and then type '<c-y>m'
  --------------------
  <ul>
      <li class="list1"></li><li class="list2"></li><li class="list3"></li>
  </ul>
  --------------------

 9. Remove a Tag

  Move cursor in block
  --------------------
  <div class="foo">
      <a>cursor is here</a>
  </div>
  --------------------
  Type '<c-y>k' in insert mode.
  --------------------
  <div class="foo">

  </div>
  --------------------
```

```
  And type '<c-y>k' in there again.
  --------------------

  --------------------
```

  10. Split/Join Tag

```
  Move the cursor inside block
  --------------------
  <div class="foo">
        cursor is here
  </div>
  --------------------
  Type '<c-y>j' in insert mode.
  --------------------
  <div class="foo"/>
  --------------------

  And then type '<c-y>j' in there again.
  --------------------
  <div class="foo">
  </div>
  --------------------
```

  11. Toggle Comment

```
  Move cursor inside the block
  --------------------
  <div>
        hello world
  </div>
  --------------------
  Type '<c-y>/' in insert mode.
  --------------------
  <!-- <div>
        hello world
  </div> -->
  --------------------
  Type '<c-y>/' in there again.
  --------------------
  <div>
        hello world
  </div>
  --------------------
```

  12. Make an anchor from a URL

```
  Move cursor to URL
  --------------------
  http://www.google.com/
  --------------------
  Type '<c-y>a'
  --------------------
  <a href="http://www.google.com/">Google</a>
```

```
   --------------------

13. Make some quoted text from a URL

   Move cursor to the URL
   --------------------
   http://github.com/
   --------------------
   Type '<c-y>A'
   --------------------
   <blockquote class="quote">
         <a href="http://github.com/">Secure source code hosting and collaborative
development - GitHub</a><br />
         <p>How does it work? Get up and running in seconds by forking a project, pushing an
existing repository...</p>
         <cite>http://github.com/</cite>
   </blockquote>
   --------------------

14. Installing emmet.vim for the language you are using:

   # cd ~/.vim
   # unzip emmet-vim.zip

   Or if you are using pathogen.vim:

   # cd ~/.vim/bundle # or make directory
   # unzip /path/to/emmet-vim.zip

   Or if you get the sources from the repository:

   # cd ~/.vim/bundle # or make directory
   # git clone http://github.com/mattn/emmet-vim.git

15. Enable emmet.vim for the language you using.

   You can customize the behavior of the languages you are using.

   --------------------
   # cat >> ~/.vimrc
   let g:user_emmet_settings = {
   \   'php' : {
   \     'extends' : 'html',
   \     'filters' : 'c',
   \   },
   \   'xml' : {
   \     'extends' : 'html',
   \   },
   \   'haml' : {
   \     'extends' : 'html',
   \   },
   \}
   --------------------
```
